

Contractual terms for the manufacturer's guarantee against perforation corrosion for the ZA-TS, ZA-V, and ZG-TS model series, which fall within the warranty period from 01/01/2023

Cosmetic or surface defects caused by corrosion, even if widespread, are excluded from the manufacturer's guarantee against perforation corrosion. The guarantee against perforation corrosion can be claimed during the contractual warranty period, generally 12 months after the first use of the new machine. The period of the manufacturer's guarantee against perforation corrosion starts with the first use of the spreader and extends for a period of 7 years.

The AMAZONE machine must be thoroughly cleaned and preserved after use and stored preserved and protected from the weather during periods of inactivity. The machine must be winterized according to the instructions in the operating manual.

The manufacturer's guarantee against perforation corrosion applies if:

1. The corrosion reaches a level that causes significant weakening of the frame structure and/or the container, or a complete perforation due to rust.
2. The machine's and operator's road safety are compromised.
3. Corrosion damage to the metal structure of the machine means that the machine's functionality can no longer be guaranteed.
