

Deep loosener

All in one operation

TL 3001 deep loosener

The compact TL deep loosener with its 4 tines makes it possible to loosen the soil down to a depth of 25 cm below the working horizon of a rotary cultivator. The TL loosens the soil down to a depth of 32 cm with a working depth of the rotary cultivator of 7 cm. This enables AMAZONE to offer one-pass cultivation without ploughing as an option, even where high levels of straw prevail. One-pass cultivation without ploughing prevents soil compaction in the sowing horizon.

	TL 3001 deep loosener
Working width (m)	3.00
Transport width (m)	3.00
Number of deep loosening legs	4
Width of the wing share (cm)	30 (60 cm option as a loose supplied part)
Frame height (mm)	1,000
Weight (kg)	494

30 cm wing shares are used as standard. A wider loosening 60 cm wing share and a side plate extension are available as an option.
